

Aviation Environments Technical Branch (DRC)

Provides mechanical, electrical, and electronic engineering technician support to the Center's aeropropulsion projects in the Icing Research Tunnel, the Aero and Acoustic Propulsion Lab, and the Engine Research Building. Support includes: collaboration with the test engineers and/or research customers to develop the test matrix and test schedule; installation and alignment of the test article and associated hardware; operation of the test facilities; and installation, calibration, and operation of instrumentation and data acquisition systems.
